

Triangulation changes the turn

Endgame Technique

THE IDEA

Triangulation is a maneuver that returns to a useful arrangement while changing whose turn it is. It works when one king has a three-square route and the other cannot mirror it without conceding something. Not every king position permits such a maneuver.

WORKED EXAMPLE

A king may move through three nearby squares to return while the opposing king has only two safe waiting squares. The resulting turn change can force the defender away from a critical pawn or entry point.

TRY IT BEFORE READING ON

What must be verified before claiming a triangulation works?

ANSWER AND REASONING

Every square on the route is safe, the opponent's replies are accounted for, and the final turn change produces a concrete gain. A diagram resemblance is not proof.

TAKE THIS INTO YOUR NEXT GAME

A waiting maneuver must end with a useful zugzwang.
