

Solve for the whole line

Thinking And Training

THE IDEA

A correct first move may come from pattern recognition or a guess. To train calculation, work out the opponent's best response and the continuation before checking the answer. Mark partially solved lines honestly.

WORKED EXAMPLE

You recognize a knight fork but overlook an intermediate check that prevents winning the queen. The first move alone did not demonstrate understanding. Replaying the full line shows which defensive resource you failed to include.

TRY IT BEFORE READING ON

How should you score a puzzle where the first move was right but the continuation was wrong?

ANSWER AND REASONING

Record it as incomplete, identify the missed reply, and solve it again later from the original position. Keep recognition and full calculation as separate measures.

TAKE THIS INTO YOUR NEXT GAME

A solution includes the resistance and the finish.
