

Pawn-ending calculation: White, move 44

Pawn-ending calculation

White to move

Previous move: 43...Kd6. Gold borders mark its start and finish.

WORKED CONTINUATION - COVER THIS SECTION FIRST

44. Kd4 g5 45. fxg5

44.Kd4 The king moves from d3 to d4. Recorded reply: **44...g5**.

45.fxg5 The pawn captures the pawn on g5.

At the end, nominal material is White 5 / Black 4 (P=1, N/B=3, R=5, Q=9). Over this line, White's balance changes by +1. Activity and king safety still affect the evaluation.

CHECKPOINT

Using P=1, N/B=3, R=5, Q=9, how much does White's material balance change over the complete line? **Answer:** +1: the balance goes from +0 to +1. Count promotions and every recapture, not just the first gain.

CARRY THE IDEA INTO YOUR GAMES

Do not enter a pawn ending because it looks simple. Rook-pawn exceptions and zugzwang can make a material advantage irrelevant.

WHAT THIS POSITION TEACHES

With only kings and pawns, a single tempo can reverse the result. Calculate opposition, capture routes, promotion races, and reserve pawn moves precisely.

HOW TO LOOK

Count actual king moves and pawn pushes, then include whose turn it is and whether promotion gives check.

The defending king is on d6. Look for a defender that can be displaced or overloaded.
